

Communication with agile-sdk

src / js / agile-sdk
agile-sdk-proxy
agile-sdk-handler

agile-sdk
wraps agile-sdk actions into callable functions (includes agile.idm, except idm.authentication)
realizes the execution of agile-sdk-proxy functions from a shell by dynamically passing parameters

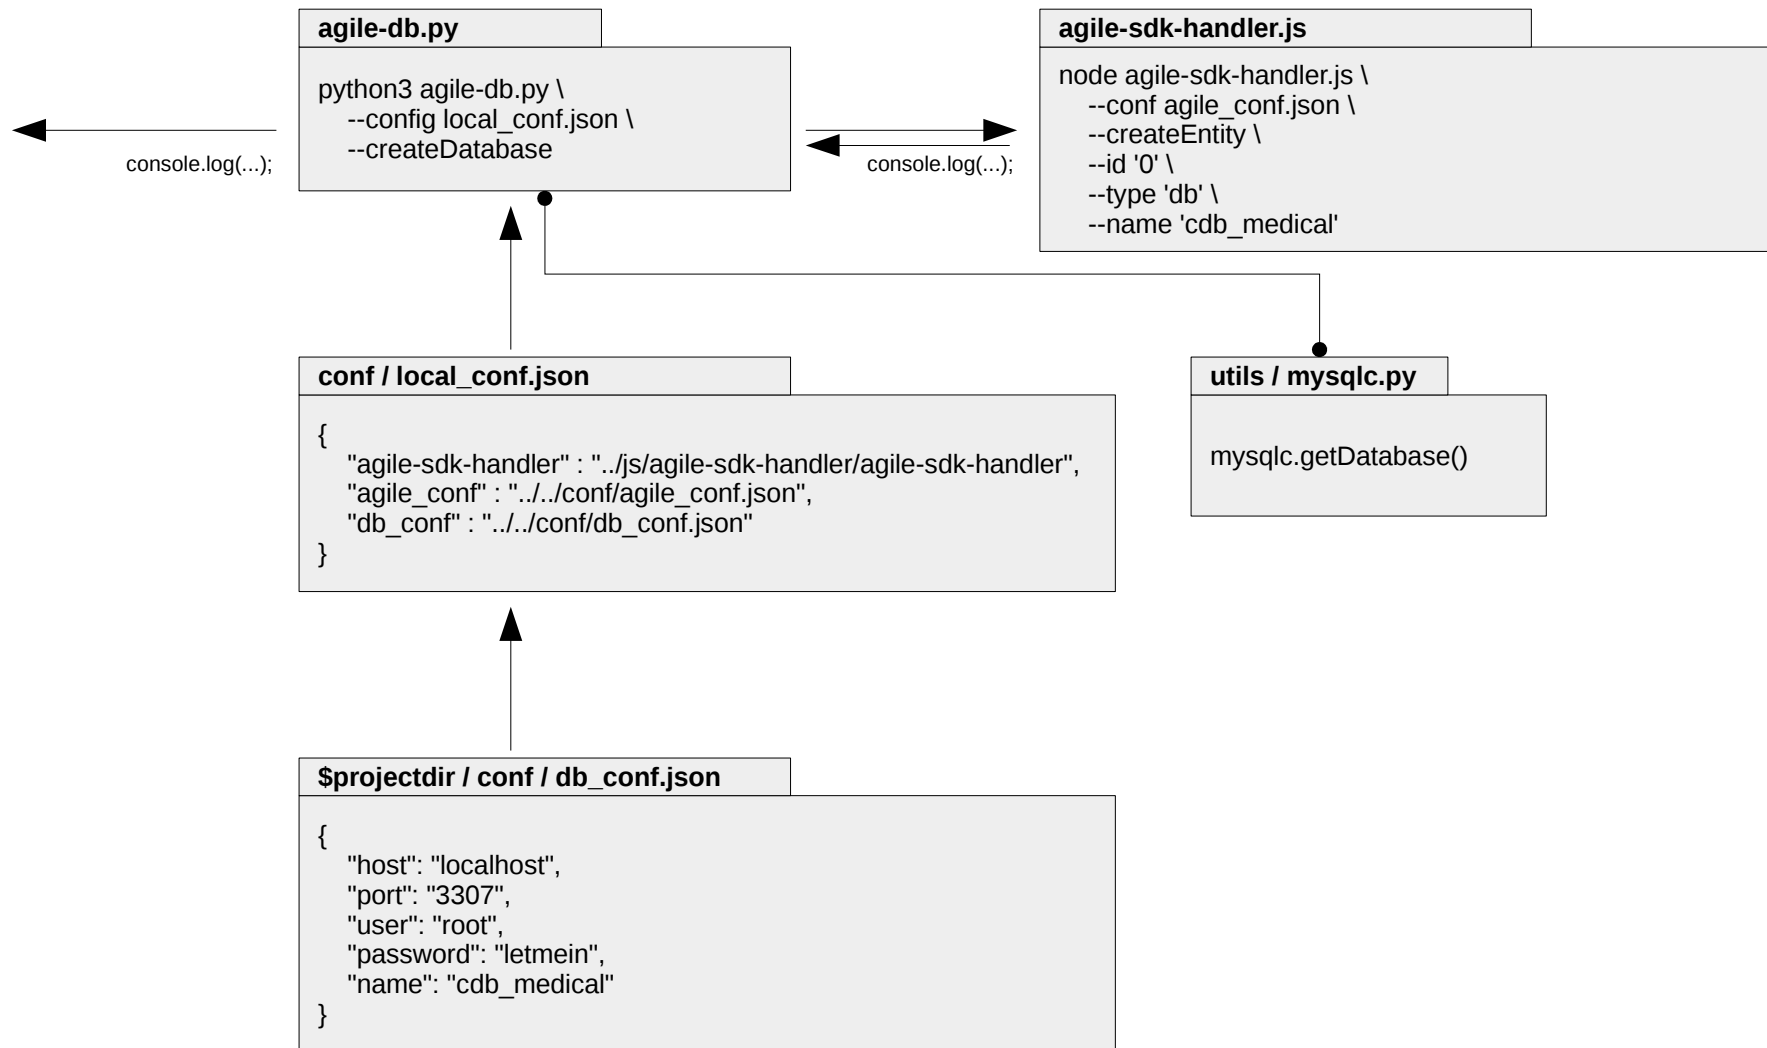

Creating database related agile entities

src / py / agile-db.py

creates db, db-table, db-column entities with **agile-sdk-handler.js**
by reading the database structure of a configured database using **utils / mysqlc.py**

Entity schemes for db, db-table, db-column are defined in **\$projectdir / schemes / entities**
Preset policies for the entities are defined in **\$projectdir / schemes / policies**

Creating example users and groups

src / py / agile-u+g.py

creates example user entites and maps them to groups with **agile-sdk-handler.js**
